PROFESSIONAL EXPERIENCE

Senior Software Engineer   *2017 - Present*
Bread Financial   *Columbus, OH*

- Lead Platform Engineering Developer Experience team building tools and frameworks for multiple engineering teams. Lead development of internal shared library that multiple projects use to connect to Kafka, interact with Redis
- Lead tech efforts in launching new products and major technical efforts (new brand integrations and conversions, migration from legacy platform to Fiserv, cloud migration)
- Develop features and resolve defects across all layers of tech stack – front end (Angular, TypeScript), business layer (Java, Sprint Boot), APIs (Azure App Services)
- Serve as accessibility SME for a team of engineers working on a website redesign effort (Angular)
- Lead a team during first company-wide Hackathon, winning second place developing a virtual assistant prototype to allow users make a credit card payment via chatbot-like interface

Software Engineer Consultant   *2017*
JPMorgan Chase & Co   *Columbus, OH*

- Developed Java application for collection, analysis, and visualization of browser performance metrics for online payments, credit card, and business websites
- Participated in all stages of software development life cycle process (planning, analysis, design and development, testing, deployment) to deliver consistent and responsive experience which allowed senior leadership to gauge enterprise performance
- Championed agile development best practices with Atlassian products to continuously deliver new functionality while maintaining product availability and providing technical support

Full Stack Software Engineer (MTS-II Systems Engineering)   *2014 – 2016*
Verizon Wireless   *Columbus, OH*

- Designed and developed user interfaces for multiple mobile web and web applications: VZTube Mobile (application to watch internal company videos), Techtools Portal (portal with links to most popular services used in call centers), Disaster Recovery Database (a dashboard to manage all information regarding steps to follow in case of data center disaster) (HTML5, CSS, JavaScript, jQuery)
- Developed all aspects of enterprise portal for executives to schedule call center visits and track action items that came out of them: UI/UX (Ext JS, Sass), back end webservices (PHP), database changes (MySQL), fully automated deployment pipeline (Stash, Jenkins)
- Lead cloud migration for Knowledge Management Systems portfolio of applications from on-premise data centers to AWS public cloud
- Built a portal for internal Enterprise Search for admins to manage feedback from call center representatives (HTML, JavaScript, CSS, Sass,Ext JS, PHP, MySQL)
- Managed agile team of offshore developers to build responsive user interfaces for mobile web application used by all Verizon retail store reps to read news (Sencha Touch, Ext JS, HTML, JavaScript, Sass,CSS)

EDUCATION

Bachelor of Arts in Computer Science, Hunter College/CUNY   *2013*
                                                                                                  New York, NY
